Professional Summary

Full-Stack Developer and Software Engineering student with experience building web, mobile, kiosk, and AI-assisted applications using TypeScript, C#, Python, React, Next.js, NestJS, and PostgreSQL. Focused on scalable backend systems, clean architecture, and product-driven development.

Education

Laguna University

2023-2027

BS in Information Technology – Specialized in Systems Development

- Dean's Lister
- Vice President's Lister

Projects

PrintBit – Self-Service Coin Operated Printing Machine Service

Tech: HTML, CSS, TypeScript, Node.js, Express.js, C# Worker Service, SQLite, ESP32

- Designed and developed a self-service printing kiosk supporting document printing, scanning, and photocopying.
- Integrated printer communication and status monitoring for paper and ink detection.
- Built backend services for payment handling, print job management, and hardware coordination.
- Developed and orchestrated communication workflows between Node.js services, C# background workers, and kiosk hardware peripherals.
- Deployed on Windows kiosk environments with assigned access mode.

SariSari

Tech: React Native, Expo, TypeScript, SQLite

- Engineered an offline-first mobile application that digitizes inventory, sales, credit and reporting workflows for sari-sari stores.
- Architected a normalized local database with SQLite for high-performance offline transactions and data integrity.
- Built scalable business modules including stock management, sales processing, customer credit tracking, and analytics dashboards.
- Applied modular architecture, reusable UI components, and strict TypeScript practices to improve maintainability and future feature expansion.

Azurea Hotel Management System

Tech: React, Django, MySQL

- Developed an hotel management platform for room reservations and property administration.
- Implemented authentication, room inventory management, amenities management, and booking workflows.
- Designed an REST APIs and database schema for scalable reservation tracking.

Technical Skills

Languages: JavaScript, TypeScript, Python, C#

Frontend: React, Next.js, Svelte

Backend: NestJS, Express.js, Django, Flask, FastAPI, ASP.NET Core

Mobile: React Native

Database: PostgreSQL, MySQL, SQLite

Tools: Expo, Postman, Git, GitHub, Jest

Architecture: REST APIs, Authentication, Database Design, Full-Stack Development, System Integration
